ABOUT ME

Software Engineer with hands-on experience building enterprise web applications and AI-driven systems. I work across the full stack — backend in C# and ASP.NET Core, frontend in React.js and Next.js, and database design with MSSQL. At DataSoft, I contribute to ERP and microfinance platforms used across banking and NGO sectors. Outside work, I research NLP and federated learning, with results published in IEEE and Springer proceedings.

WORK EXPERIENCE

DataSoft Systems Bangladesh Limited

Feb 2025 – Present

Associate Software Engineer

- Developed and maintained enterprise **Smart ERP** modules — inventory tracking, user management, and reporting — using ASP.NET Core, ASP.NET MVC, and MSSQL stored procedures; optimized legacy queries into indexed views, reducing report load times.
- Built and enhanced frontend dashboards for **Microfin360** using React.js and Next.js, improving usability for field officers handling loan disbursement workflows.
- Designed RESTful API endpoints with structured error handling and role-based authorization, supporting integration with third-party payment and reporting services.
- Modelled relational database schemas, writing stored procedures and parameterized queries to enforce data integrity across multi-tenant environments.
- Collaborated with engineers and analysts on requirements, code reviews, and sprint planning under an Agile workflow.

GOPLEXN

Dec 2023 – Dec 2024

Junior Software Engineer

- Developed a full-featured **Inventory Management System** using ASP.NET Framework Web API with Bootstrap frontend, covering product catalogue, stock tracking, reorder alerts, and printable reports.
- Built an **Employee Management System** with ASP.NET MVC, implementing modules for employee records, attendance tracking, leave management, and payroll reporting.
- Integrated React.js and Next.js into .NET Core, improving page responsiveness and reducing full-page reload patterns across key user flows.
- Designed and maintained MSSQL schemas — stored procedures, triggers, and views — supporting complex reporting queries with sub-second response times.
- Built JWT-based authentication systems; resolved production bugs by tracing multi-layer stack traces and deploying hotfixes under time pressure.

EDUCATION

2020 – 2024 Bachelor of Science

Computer Science & Engineering

American International University – Bangladesh

CGPA: 3.40 / 4.00

SKILLS

EXPERT C#, ASP.NET Core, ASP.NET MVC, REST API, MSSQL

ADVANCED React.js, Next.js, Entity Framework, Python, Git, Docker

INTERMEDIATE Azure, PHP, TypeScript, Machine Learning, CNN

BEGINNER Deep Learning, Transformers, LLMs, PostgreSQL

PERSONAL PROJECTS

Donation Full Project (Assist Pro)

Full-stack donation management platform connecting donors and recipients. Features user authentication, role-based access control, admin dashboard, and campaign management. Backend and frontend containerized separately with Docker.

PHP • TYPESCRIPT • JAVASCRIPT • DOCKER

https://github.com/Asgorreaaj/Donation_Full_Project

Tour & Travel Management System

Web application for managing travel packages, bookings, and customer operations. Built with a clean layered architecture separating Business Logic and Data Access layers. Supports package listing, booking workflows, and admin management.

C# • ASP.NET MVC • BLL/DAL ARCHITECTURE

<https://github.com/Asgorreaaj/TourAndTravel>

Grocery Store Web Application

Online grocery shopping platform with full customer and admin functionality — product management, cart, wishlist, checkout, order management, and an admin panel for inventory control and order tracking.

PHP • CSS • MYSQL

<https://github.com/Asgorreaaj/grocery-store>

AI Model Evaluation — LLaMA 3 (8B)

Structured evaluation framework for Meta LLaMA 3 (8B-chat-hf) across general knowledge, creative writing, code generation, software design, and multi-step reasoning. Analysed prompt engineering strategies and benchmarked response quality and inference performance.

PYTHON • PYTORCH • HUGGING FACE • JUPYTER
